

Habib Matar

Hi, my name is Habib Matar. I am an Instructor at CGCC teaching and developing courses in Artificial Intelligence and Machine Learning. I have been with the AIM program since its beginnings in 2019, when Intel approached us with the opportunity to work with them! My background is in Computer Science at ASU with most of my Master's courses delving into Artificial Intelligence topics. I have worked at Intel as a Production Leader and worked at Northrop Grumman for my internship and as a software engineer for a period of time. I have an immense passion for the field of AI and my personal wish is to take these seemingly difficult topics and make them easier for the general public to understand and grow their careers using! My personal hobbies include: lots of hiking and sports such as frisbee and soccer, weightlifting, video games and reading.
